Where Bee-utiful Lawns bee-gin

## Lawn Revitalization

*Revitalize for a Thick, Lush, Green and Healthy Lawn*

*Did you know your lawn gets old? No need to worry because Bee-Lawn offers several Lawn Revitalization Services to repair damaged turf, increase the density (thickness) of your lawn and strengthen your lawn for beautiful aesthetics and your maximum enjoyment.*

### Overseeding

**To thicken an existing lawn.** We slit-seed into the lawn and introduce newer and better varieties of seed into the thinning or damaged turf. Bee-Lawn applies a starter fertilizer and uses only the highest quality seed available.

### Core Aeration

**To reduce soil compaction** and increase the amount of air, water, and fertilizer available to the root zone. We remove small plugs of soil and then apply a balanced fertilizer. This is also an effective way to reduce the build-up of thatch in the lawn.

### Lawn Renovation

**To restore heavily weed-infected** and undesirable grass-type lawns back to original health and beauty. We core-aerate your lawn, apply a starter fertilizer, and then slit-seed the lawn area.

### Lime Application

**To reduce soil acidity** we add Lime which enables your lawn to better utilize the fertilizer and take up nutrients that occur naturally in your soil. Liming in conjunction with core aeration greatly increase the lime's effectiveness.
