Bee-Weed Free

Designed for homeowners primarily seeking control of broadleaf weeds.

Two applications recommended, Late Spring and Fall.

Bee-Grub Free

Applied in Late Spring, the application provides season-long protection against damaging lawn Grubs.

Bee-Flea & Tick Free

Protect your outdoor living areas from Fleas, Mosquitoes, Gnats, Controls Ticks, the major carrier of Lyme Disease. *Applications start in mid-Spring. Repeated every 4-6 weeks.*

All prices are per service plus Sales Tax.

"You choose the program that's right for you and your family!"

SPECIAL LAWN TREATMENTS

Overseeding

To **thicken an existing lawn**. The lawn is slit-seeded or broadcast with a spreader to introduce new and better varieties of seed into the thinning or damaged turf. Bee-Lawn also applies a starter fertilizer.

Core Aeration

To **reduce soil compaction and increase the amount of air, water, and fertilizer available to the root zone**. We remove small plugs of soil, then apply a balanced fertilizer. This is an effective way to reduce the build-up of thatch in the lawn.

Lawn Renovation

To **restore heavily weed-infected and undesirable grass-type lawns**. We core-aerate your lawn, apply a starter fertilizer, and then slit-seed the lawn area.

Lime Application

To **reduce soil acidity**. Liming enables your lawn to better utilize the fertilizer and take up nutrients that occur naturally in your soil. Liming in conjunction with core-aeration greatly increases the lime's effectiveness.

"When your lawn needs extra help to look it's very best."

TREE & SHRUB CARE

Dormant Oil Spray

Most effective way to control over-wintering insects in your landscape. *Apply in March or early April.*

Insect/Mite Control

Foliar spray controls the pests that injure the trees and shrubs in your landscape. *Applications can be made from late Spring through early Fall. Number of applications depends on the pest problems and the individual plants that are to Bee-protected.*

Disease Control

Controls disease problems that affect certain trees and shrubs in the landscape. Optimum disease control is achieved when the fungicide is applied in a regularly scheduled preventive program. *Start in early Spring.*

All prices are per service plus Sales Tax.

"Give your trees and shrubs the treatments they need."

LANTERNFLY CONTROL

Bye-ByeLanternfly.com

Invasive Pests threaten our natural environment

2 METHODS OF CONTROL AVAILABLE

Foliar Spray

Directly contacts the lanternfly providing a quick knock-down, provides 3-4 week protection. For small trees and shrubs.

Basal Trunk Spray

Systemic application kills the lanternfly as it feeds on any part of your plants, provides season-long protection. For large and small trees.

_____ Basal Trunk Spray _____

FLOWER BED MAINTENANCE

Mulching

Spruce up your flower beds with a fresh layer of mulch!

Price Includes:

- _____ Edging _____ Shrubbery Trimming
- _____ Weed Control _____ Clean Out Beds
- _____ Fertilizer _____

Color: Black Brown Red

Weed Control

Safe, effective way to eliminate unwanted weeds from germinating in your beds. Start in early Spring, with a repeated application in Late Summer. Does not harm existing plants.

Spring and/or Fall Clean-up

Remove leaves from beds and the lawn area. Leaf clean-up can minimize insect infestation and lawn diseases.

"Let us do the dirty work."
