LAWN CARE PROGRAMS

SPECIAL LAWN TREATMENTS

Aeration & Overseeding

To loosen the soil, allowing water, air, and nutrients to reach the grass roots, then overseed to thicken an existing lawn for lush, healthy turf. Starter fertilizer is applied to complete the process.

Core Aeration

To reduce soil compaction and increase the amount of air, water, and fertilizer available to the root zone. We remove small plugs of soil, then apply a balanced fertilizer. This is an effective way to reduce the build-up of thatch in the lawn.

Lawn Renovation

To restore heavily weed-infested and undesirable grass-type lawns. We core-aerate your lawn, apply a starter fertilizer, and then slit-seed the lawn area.

Lime Application

To reduce soil acidity. Liming enables your lawn to better utilize the fertilizer and take up nutrients that occur naturally in your soil. Liming in conjunction with core-aeration greatly increases the lime's effectiveness.

Bee-Green

Spring Crabgrass Prevention

Late Spring Broadleaf Control and Fertilizer

Early Fall Fertilizer

Late Fall Fertilizer

Bee-Greener

Spring Crabgrass Prevention

Late Spring Broadleaf Control and Fertilizer

Early Fall Broadleaf Control and Fertilizer

Late Fall Fertilizer

Bee-Weed Free

Spring Crabgrass Prevention

Late Spring Broadleaf Control and Fertilizer

Applied in Late Spring, the application provides sea-

son-long protection against damaging lawn Grubs.

Two applications recommended, Late Spring and Fall.

All prices are per service plus Sales Tax.

"You choose the program that's right for you and your family!"

FAQ

Bee-Lawn applies a treatment?

As a precaution we suggest you stay off the lawn for 3 hours or until the lawn area is dry. Bee-Lawn always posts a lawn sign in the treated area with a notice stating the date, time, and explanation of the service provided with any special instructions.

How long after treatment can I mow the lawn?

We suggest waiting 48 hours. For your best result, do not bag or compost the lawn clippings for 2 mowings following the treatment.

Do I have to sign a contract?

No. There is no contract to sign and you may cancel at any time.

TREE & SHRUB CARE

Dormant Oil Spray

Most effective way to control over-wintering insects in your landscape. Apply in March or early April.

Insect/Mite Control

Foliar spray controls the pests that injure the trees and shrubs in your landscape. Applications can be made from late Spring through early Fall. Number of applications depends on the pest problems and the individual plants that are to Bee-protected.

Disease Control

Controls disease problems that affect certain trees and shrubs in the landscape. Optimum disease control is achieved when the fungicide is applied in a regularly scheduled preventive program. Start in early Spring.

All prices are per service plus Sales Tax.

"Give your trees and shrubs the treatments they need."

LANTERNFLY CONTROL

2 METHODS OF CONTROL AVAILABLE

Foliar Spray

Invasive Pests threaten our natural environment

Basal Trunk Spray

Systemic application kills the lanternfly as it feeds on any part of your plants, provides season-long protection. For large and small trees.
